Section IV.	**National Stock Number and Part Number Index**	665	

Section I. INTRODUCTION

1. Scope.

This manual lists repair parts; special tools; test, measurement, and diagnostic equipment (TMDE), and other support equipment required for operation and performance of organizational maintenance of the 2-1/2 ton truck. It authorizes the requisitioning and issue of spares and repair parts as indicated by the source and maintenance codes.

2. General.

This Repair Parts and Special Tools List is divided into the following sections:

a. Section II. Repair Parts List. A list of repair parts authorized for use in the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending numerical sequence, with the parts in each group listed in figure and item number sequence. Bulk materials are listed in NSN sequence.

b. Section III. Special Tools List. A list of special tools. TMDE, and support equipment authorized for the performance of maintenance at the direct and general support levels.

c. Section IV. National Stock Number and Part Number Index. A list, in National item identification number (NIIN) sequence, of all National stock numbers (NSN) appearing in the listings, followed by a list, in alphameric sequence, of all part numbers appearing in the listings. National stock numbers and part numbers are cross-referenced to each illustration figure and item number appearance.

3. Explanation of Columns.

The following provides an explanation of columns found in the tabular listings:

a. I//ustration. This column is divided as follows:

(1) Figure Number. Indicates the figure number of the illustration in which the item is shown.

(2) Item Number. The number used to identify item called out in the illustration.

b. Source, Maintenance, and Recoverability Codes (SMR).

(1) Source code. Source codes are assigned to support items to indicate the manner of acquiring support items for maintenance, repair, or overhaul of end items. Source codes are entered in the first and second positions of the Uniform SMR Code format as follows:

Code	*Definition*
PA	- Item procured and stocked for anticipated or known usage.
PB	- Item procured and stocked for insurance purpose because essentiality dictates that a minimum quantity be available in the supply system.
PC	- Item procured and stocked and which otherwise would be coded PA except that it is deteriorative in nature.
PD	- Support item, excluding support equipment, procured for initial issue or outfitting and stocked only for subsequent or additional initial issues or outfittings. Not subject to automatic replenishment.
PE	- Support equipment procured and stocked for initial issue or outfitting to specified maintenance repair activities.
PF	- Support equipment which will not be stocked but which will be centrally procured on demand.
PG	- Item procured and stocked to provide for sustained support for the life of the equipment. It is applied to an item peculiar to the equipment which, because of probable discontinuance or shutdown of production facilities, would prove uneconomical to reproduce at a later time.
KF	- An item of a maintenance kit and not purchased separately. Maintenance kit defined as a kit that provides an item that can be replaced at organizational or intermediate levels of maintenance.
KB	- Item included in both a depot overhaul/repair kit and a maintenance kit.
MO	- Item to be manufactured or fabricated at organizational level.
MF	- Item to be manufactured or fabricated at the direct support maintenance level.
AO	- Item to be assembled at organizational level.
XA	- Item is not procured or stocked because the requirements for the item will result in the replacement of the next higher assembly.
XB	- Item is not procured or stocked. If not available through salvage, requisition.
XC	- Installation drawing, diagram, instruction sheet, field service drawing, that is identified by manufacturer's part number.

XD — A support item that is not stocked. When required, item will be procured through normal supply channels.

NOTE: Cannibalization or salvage maybe used as a source of supply for any items source coded above except those coded XA, and aircraft support items as restricted by AR 700-42.

(2) Maintenance Code. Maintenance codes are assigned to indicate the levels of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the Uniform SMR Code format as follows:

(a) The maintenance code entered in the third position will indicate the lowest maintenance level authorized to remove, replace, and use the support item. The maintenance code entered in the third position will indicate one of the following levels of maintenance:

Code	*Application/Explanation*
C	Crew or operator maintenance performed within organizational maintenance.
0	Support item is removed, replaced, used at the organizational level.

(b) The maintenance code entered in the fourth position indicates whether the item is to be repaired and identities the lowest maintenance level with the capability to perform complete repair (i.e., all authorized maintenance functions). This position will contain one of the following maintenance codes:

Code	*Application/Explanation*
0	The lowest maintenance level capable of complete repair of the support item is the organizational level.
F	The lowest maintenance level capable of complete repair of the support item is the direct support level.
H	The lowest maintenance level capable of complete repair of the support item is the general support level.
D	The lowest maintenance level capable of complete repair of the support item is the depot level, performed by depot, mobile depot or specialized repair activity.
L	Repair restricted to designated specialized repair activity.
Z	Nonreparable. No repair is authorized.
B	No repair is authorized. The item may be reconditioned by adjusting, lubricating, etc., at the user level. No parts or special tools are procured for the maintenance of this item.

(3) Recoverability Code. Recoverability codes are assigned to support items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the Uniform SMR Code format as follows:

Recoverability Codes	*Definition*	*Definition*
Z	Nonreparable item. When unserviceable, condemn and dispose at the level indicated in position 3.	
O	Reparable item. When uneconomically reparable, condemn and dispose at organizational level.	
F	Reparable item. When uneconomically reparable, condemn and dispose at the direct support level.	
H	Reparable item. When uneconomically reparable, condemn and dispose at the general support level.	
D	Reparable item. When beyond lower level repair capability, return to depot. Condemnation and disposal not authorized below depot level.	
L	Reparable item. Repair, condemnation, and disposal not authorized below depot/specialized repair activity level.	
A	Item requires special handling or condemnation procedures because of specific reasons (i.e., precious metal content, high dollar value, critical material or hazardous material). Refer to appropriate manuals/directives for specific instructions.	

c. National Stock Number. Indicates the National stock number assigned to the item which will be used for requisitioning purposes.

d. Part Number. Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications standards, and inspection requirements, to identify an item or range of items.

NOTE

When a stock numbered item is requisitioned, the repair part received may have a different part number than the part being replaced.

e. Federal Supply Code for Manufacturer (FSCM). The FSCM is a 5-digit numeric code listed in SB 708-42 which is used to identify the manufacturer, distributor, or Government agency, etc.

f. Description. Indicates the Federal item name and, if required, a minimum description to identify the item. Items that are included in kits and sets are listed below the name of the kit or set with the quantity of each item in the kit or set indicated in the quantity incorporated in unit column. When the part to be used differs between serial numbers of the same model, the effective serial numbers are shown as the last line of the description. In the Special Tools List, the initial basis of issue (BOI) appears as the last line in the entry for each special tool, TMDE, and support equipment. When density of equipments supported exceeds density spread indicated in the basis of issue, the total authorization is increased accordingly.

g. Unit of Measure (U/M). Indicates the standard of the basic quantity of the listed item as used in performing the actual maintenance function. This measure is expressed by a two-character alphabetical abbreviation (e.g., ea, in, pr, etc.). When the unit of measure differs from the unit of issue, the lowest unit of issue that will satisfy the required units of measure will be requisitioned.

h. Quantity Incorporated in Unit. Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for a functional group or an assembly. A "V" appearing in this column in lieu of a quantity indicates that no specific quantity is applicable, (e.g., shims, spacers, etc.).

4. Special Information.

a. Usable on codes are shown in the description column. Uncoded items are applicable to all models. Identification of the usable on codes used in this publication are:

Code	*Used On*
AA	All models equipped with gasoline engine Model OA-331
AB	All models equipped with the multi-fuel LDS-427-2 engine
AC	All models equipped with multi-fuel engines LD-465-1, LD465-1C or LDT-465-1C
AD	All models equipped with front winch
AE	All models equipped with power takeoff

b. Detailed manufacturing instructions for items source coded to be manufactured or fabricated are found in TM 9-2320-209-20-1 (TM 9-2320-209-20, gasoline models only). Bulk materials required to manufacture items are listed in the Bulk Material Group 9501 of this manual.

c. Detailed assembly instructions for items source coded to be assembled are found in TM 9-2320-211-20-1 (TM 9-2320-209-20, gasoline models only). Assembly components are listed immediately following the item to be assembled.

d. Repair parts kits and gasket sets appear as the last entries in the repair parts listing for the figure in which its parts are listed as repair parts.

e. The illustrations in this manual are identical to the applicable illustrations published in the -34P. Only those parts assigned a maintenance code "O" are listed in the tabular listing. Only illustrations containing organizational authorized items are used in this -20P manual.

f. The following publications pertain to the 2-1/2 ton truck and its components:

LO 9-2320-209-12/1	Lubrication Order for 2-1/2 Ton, 6x6, M44A1 and M44A2 Series Trucks (Multifuel)
LO 9-2320-209-12	Lubrication Order for 2-1/2 Ton, 6x6 Trucks (Gasoline Models Only)
TM 9-2320-209-10/1	Operator's Manual for 2- 1/2 Ton, 6x6, M44A1 and M44A2 Series Trucks (Multifuel)
TM 9-2320-209-10	Operator's Manual for 2- 1/2 Ton, 6x6 Trucks (Gasoline Models Only)
TM 9-2320-209-20-1	Organizational Maintenance Manual for 2-1/2 Ton, 6x6, M44A1 and M44A2 Series Trucks (Multifuel)
TM 9-2320-209-20	Organizational Maintenance Manual for 2-1/2 Ton, 6x6 Trucks (Gasoline Models Only)

NOTE

References to the M44A2 series apply only to the Multifuel Clean Air Engine (LDT 465-1C, NSN 2815-00-103-264). Some of the figures include the words "clean air" in parenthesis to designate this.

g. The following is a list of the vehicle models and the NSN'S with and without winches:

Vehicle	*Model*	*NSN without winch*	*NSN with winch*
Truck, Cargo	M34	2320-00-739-7545	2320-00-835-8536

5. How to Locate Repair Parts.

a. When National Stock Number or Part Number is Unknown :

(1) First. Using the table of contents, determine the functional group within which the repair part belongs. This is necessary since illustrations are prepared for functional groups and listings are divided into the same groups.

(2) Second. Find the illustration covering the functional group to which the repair part belongs.

(3) *Third.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) Fourth. Using the Repair Parts Listing, find the figure and item number noted on the illustration.

b. When National Stock Number or Part Number is Known.

(1) First. Using the Index of National Stock Numbers and Part Numbers, find the pertinent National stock number or part number. This index is in ascending NSN sequence followed by a list of part numbers in ascending alphanumeric sequence, cross-referenced to the illustration figure number and item number.

(2) Second. After finding the figure and item number, locate the figure and item number in the repair parts list.

6. Abbreviations

Abbreviation	Explanation
AWG	American wire gage
br	brass
cd	cadmium
id	inside diameter
in.	inch
NI	not illustrated
No.	number
od	outside diameter
S	steel
syn-ru	synthetic rubber
thd	thread
thk	thick
W	wide
w/	with
w/o	without
zn	zinc
zn-pltd	zinc plated

7. Recommendation for Maintenance Publications Improvements.

You can help improve this manual by calling attention to errors and by recommending improvements and stating your reasons for the recommendations. Your letter or DA Form 2028, Recommended Changes to Publications, should be mailed directly to Commander, U.S. Army Tank-Automotive Materiel Readiness Command, ATTN: DRSTA-MB, Warren, Michigan 48090. A reply will be furnished directly to you.

POWER GATE LEVER POSITION

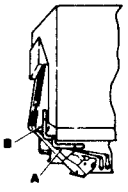

IN

OUT

77

OPERATING INSTRUCTION DATA POWER LIFT GATE 3000 LB. CAP.

ENGAGE POWER TAKE OFF

TO OPEN - PUSH LEVER "A" DOWN TO RELEASE HOOK. THEN PULL TO EXTREME UP. GATE WILL STOP AUTOMATICALLY WHEN REACHING OPEN POSITION.

TO CLOSE - PUSH LEVER "A" TO EXTREME DOWN POSITION WHEN REACHING CLOSED POSITION, GATE WILL AUTOMATICALLY STOP AND LOCK IN POSITION.

TO LOWER - MOVE LEVER "B" TOWARD FRONT TO RELEASE HOOKS, THEN TO EXTREME REAR.

TO ELEVATE - MOVE LEVER "B" TOWARD FRONT ON TRUCK WHEN GATE REACHES COMPLETE ELEVATED POSITION, LEVER RETURNS TO NEUTRAL AND GATE IS AUTOMATICALLY SAFETY HOOKED IN POSITION. STOP GATE AT ANY DESIRED ELEVATION BY MOVING THIS LEVER TO NEUTRAL POSITION.

WARNING:

DO NOT OVERLOAD
DISTRIBUTE LOAD EVENLY ON GATE
DO NOT CARRY LOAD ON GATE IN TRANSIT.
LUBRICATE ALL WORKING PARTS REGULARLY.

U.S. GOVERNMENT PRINTING OFFICE : 1985 o - 484-184

This fine document...

Was brought to you by me:

Liberated Manuals -- free army and government manuals

Why do I do it? I am tired of sleazy CD-ROM sellers, who take publicly available information, slap “watermarks” and other junk on it, and sell it. Those masters of search engine manipulation make sure that their sites that sell free information, come up first in search engines. They did not create it... They did not even scan it... Why should they get your money? Why are not letting you give those free manuals to your friends?

I am setting this document FREE. This document was made by the US Government and is NOT protected by Copyright. Feel free to share, republish, sell and so on.

I am not asking you for donations, fees or handouts. If you can, please provide a link to liberatedmanuals.com, so that free manuals come up first in search engines:
