PREFACE

1. The Mission Training Plan (MTP) provides the active and reserve component training manager with a descriptive, performance-oriented training program to assist leaders in training their units. Standards for training may be made more difficult, but may not be lowered. The ARTEP is in accordance with the United States (US) Army training and tactical doctrine. The ARTEP contains those tasks, which support the Military Intelligence (MI) unit missions outlined in emerging doctrinal manuals. Unit leaders must use their higher headquarters Mission Essential Task List (METL) and training guidance to identify which tasks in the ARTEP must be emphasized. Task standards in the ARTEP are the Army's standards for executing those tasks.

2. FM 3.0, Operations, provides us with the Army's keystone fighting doctrine. Army operations doctrine builds on the collective knowledge and wisdom gained through recent combat operations, Stability Operations, Support Operations, numerous exercises, and the deliberate process of informed reasoning throughout the Army. It is rooted in time-tested principles and fundamentals, while accommodating new technologies and diverse threats to national security.

3. FM 34-1, Intelligence and Electronic Warfare Operations, is the Army's capstone manual for MI doctrine. As the Army moved to incorporate new technologies for diverse threats, the MI Branch conducted a detailed assessment of its own that resulted in an approved MI Force Design Update. This update resulted in major changes in MI that are addressed in FM 34-1 and incorporated into this MTP.

4. This MTP is designed specifically for the MI General Support Company (Digitized) equipped with emerging digitized technology and systems. This MTP replaces the collective tasks found in ARTEP 34-113-11-MTP and ARTEP 34-113-12-MTP dated 29 September 1995 for this type of unit.

5. Although the collective tasks contained in this manual are generic in nature, the MI Branch Concept and all new emerging systems and organizations are reflected in the appropriate places. As tactics, techniques, and procedures are developed for emerging systems, they will be included into future editions of this document and additional ARTEPs.

6. MI commanders are encouraged to use this as a guide to develop their training programs. Units affected by this document may not be exactly alike in composition or in the way they carry out their missions. The commander must modify the training and evaluation outlines (T&EOs) to fit the training requirements of the unit.

7. Unless this publication states otherwise, masculine nouns and pronouns do not refer exclusively to men.

8. The proponent for this publication is the United States Army Intelligence Center & Fort Huachuca (USAIC&FH). Submit changes/suggestions for improving this publication on DA Form 2028 (Recommended Changes to Publications and Blank Forms) to Commander, USAIC&FH, ATTN: ATZS-FDR-TA, Fort Huachuca, AZ 85613-6000.

CHAPTER 1

Unit Training

1-1. General. This mission training plan (MTP) provides the commander and leaders with guidance on how to train the key missions of the unit. The specific details of the unit's training program depends on the following factors:

a. Unit's mission-essential task list (METL).

b. Chain of command training directives and guidance.

c. Training priorities of the unit.

d. Availability of training resources and areas.

1-2. Supporting Material. This MTP describes a critical mission-oriented training program that is part of the next higher echelon's training program. This relationship is illustrated in Figure 1-1. The unit's training program consists of:

a. ARTEP 34-385-TSP for the Digitized Military Intelligence Battalion. This Army training and evaluation program (ARTEP) indicates the relationship of the company's training program to the battalion training program.

b. Soldier training publications (STPs) for the appropriate military occupational specialty (MOS) and skill levels (SLs).

c. Officer Foundation Standards (OFS) manual for platoon leaders.

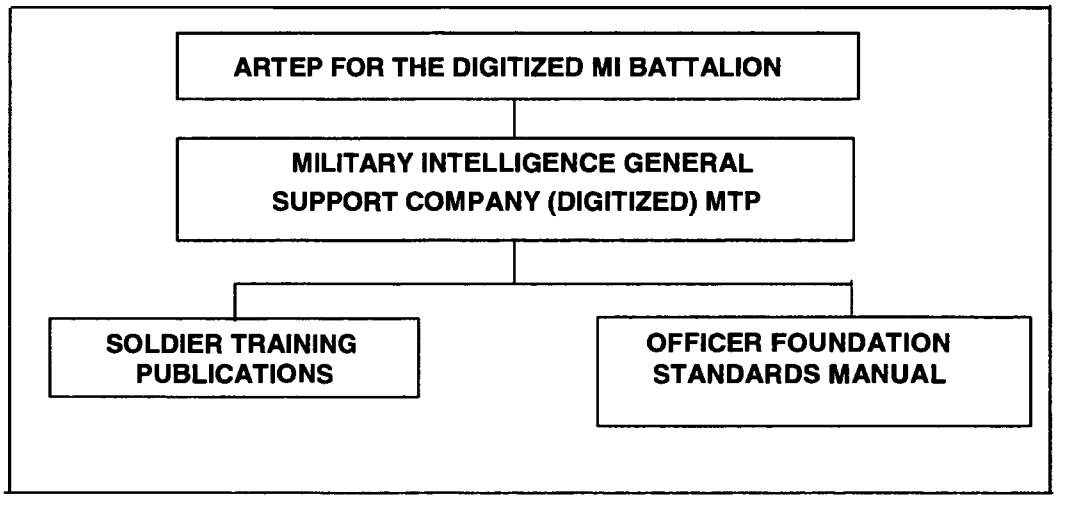

Figure 1-1. MTP echelon relationship.

1-3. Contents. This MTP is organized into six chapters and two appendices:

a. Chapter 1, Unit Training, provides the explanation and organization of this MTP. This chapter explains how to use this MTP in establishing an effective training program.

b. Chapter 2, Training Matrixes, shows the relationship between missions and collective tasks.

c. Chapter 3, Mission Outlines/Training Plans, presents a graphic portrayal of the relationship between missions and their subordinate tasks.

d. Chapter 4, Training Exercise, consists of a situational training exercises (STX). It provides training information and a pre-constructed scenario. Also, it can serve as a part of an internal or external evaluation. This exercise may be modified to suit the training needs of the unit.

e. Chapter 5, Training and Evaluation Outlines (T&EO), provides the training and evaluation criteria for all the tasks the unit must master to effectively perform its mission. Each task is a training and evaluation outline that identifies task steps, performance measures, and individual and leader tasks. Each T&EO is part of a mission; which, in various combinations, compose a training exercise as illustrated in Chapter 4.

f. Chapter 6, External Evaluation, provides instructions for the planning, preparation, and execution of an external evaluation.

g. Appendix A, Combined Arms Training Strategy, provides user information, a description of the training strategy, and a task template.

h. Appendix B, Battlefield Operating Systems (BOS), provides a description of each of the Army's BOS systems.

1-4. Mission and Tasks

a. This MTP concerns specified missions found in the table of organization and equipment (TOE) and implied missions this unit must perform in order to accomplish the specified missions. The critical missions are the focus for this unit. The commander may supplement these missions with his own. The following is a listing of the missions for this unit:

(1) Deploy/Redeploy.

(2) Protect the Force.

(3) Communicate.

(4) Move.

(5) Maintain/Sustain/Resupply.

(6) Survive.

(7) Provide Intelligence Support.

b. Each of these missions may be trained individually or jointly with other missions. Training is based on the criteria described in the T&EOs. Several T&EOs can be trained as a STX. Various combinations of STXs can be used to develop a FTX for the unit to practice its entire mission responsibility. Several STXs can be developed into an external evaluation designed by the next higher echelon to evaluate the unit's ability to perform multiple missions under stress in a realistic environment.

c. Section tasks are trained in much the same way as described above. Leader tasks in support of the unit's missions are trained through STP and OFS training, battle simulations, and execution of this unit's missions.

d. Individual tasks that support unit tasks are mastered by training to standards in the appropriate STP.

1-5. Principles of Training. This MTP is based on the training principles found in FM 25-100, Training the Force. For further information, see Paragraph 1-7 below.

1-6. Training Strategy. The training program developed and executed by a unit to train to standards in its critical missions is a component of the Army's Combined Arms Training Strategy (CATS). The purpose of the CATS is to provide direction and guidance on how the Total Army trains and identifies the resources required to support that training. CATS provides the tools that enable the Army to focus and manage training in an integrated manner. Central to the CATS is a series of, proponent generated, unit and institutional strategies that describe the training and training resources required to train to standard.

a. The unit training strategies central to CATS provide the commander with a descriptive "menu" for training. CATS reflects, while there is an optimal way to train to standard, it is unlikely all units in the Army have the exact mix of resources required to execute an optimal training strategy.

b. This unit's training strategy is composed of three separate training strategies. When integrated with the training tasks found in the MTP, they form a comprehensive and focused training strategy that allows the unit to train to standard. The elements of this unit's training strategy are--

(1) Combined Arms Training Strategy. CATS is intended to provide a set of recommended training frequencies for key training events in a unit and depict those resources required to support the training events.

(2) Soldier strategy. The soldier strategy provides an annual plan for training and maintaining skills at the individual level and lists the resources required to train a soldier.

c. A critical element in the unit training strategy is the identification of critical training gates. Critical training gates are defined as training events that must be conducted to standard before moving on to a more difficult or resource intensive training event or task. Training gates follow the 'crawl, walk, run' training methodology. For instance, if the unit training strategy calls for conducting a STX as a critical training gate for the FTX, the training tasks contained in the STX must be trained to standard prior to conducting the FTX. Standards for all tasks must be clearly defined so the trainer can assess the preparedness of his soldiers, or unit(s), to move on to more complex training events. The provision for critical training gates recognizes that the unit's METL and the commander's assessment of his unit's training status will determine the selection and timing of the collective training exercises in a specific unit's training strategy.

d. When developing the unit's training plan, the commander identifies the training tasks from the MTP, which are required to train his METL.

1-7. Conducting Training. This MTP is designed to facilitate the planning, preparation, and conduct of unit training as explained in FM 25-100, Training the Force, and FM 25-101, Battle Focused Training.

a. The commander assigns the missions and tasks for training based on his METL and the training guidance from the next higher headquarters. Trainers must plan and execute training in support of this guidance.

b. The commander reviews the mission outline in Chapter 3 to determine whether the FTX and STXs provided will support or can be modified to support the senior commander's guidance. If they do not support the guidance or need to be modified, refer to the matrix in Chapter 2. The matrix provides a listing of collective tasks that must be mastered to perform the mission.

c. The commander prioritizes the tasks that need training. Because training time is at a premium, the commander must orient training on the greatest challenges and most difficult sustainment skills.

d. The commander integrates training tasks into the training schedule by--

(1) Listing the tasks in the priority and frequency they need to be trained.

(2) Determining the amount of time required and how multi-echelon training can be used for the best results.

(3) Determining where the training can take place.

(4) Determining who is responsible for what. The leader of the element being trained must always be involved.

(5) Organizing requirements into blocks of time and training vehicles.

e. The commander must approve the list of tasks to be trained and schedule them on the unit training schedule.

f. The commander must determine the equipment and supplies needed to conduct the training.

g. The commander must keep subordinate leaders informed and oversee their training. Standards must be rigidly enforced.

1-8. Force Protection (Safety)

a. Safety is a component of force protection. Commanders, leaders, and soldiers use risk assessment and management to tie force protection to the mission. Risk management assigns responsibility, institutionalizes the commander's review of operational safety, and leads to decision making at a level of command appropriate to the risk. The objective of safety is to help units protect combat power through accident prevention, which enables units to win fast and decisively with minimal losses. Safety is an integral part of all combat operations and begins with readiness. Readiness determines a unit's ability to perform its METL to standard. Readiness standards addressed during METL assessment are:

(1) Soldiers with the self-discipline to consistently perform tasks to standard.

(2) Leaders who are ready, willing, and able to enforce standards.

(3) Training that provides skills needed for performance to standard.

(4) Standards and procedures, for task preference, that are clear and practical.

(5) Support for task preference, including equipment, personnel, maintenance, facilities, and service.

b. Risk management is a tool that addresses the root causes (readiness shortcomings) of accidents. It assists commanders and leaders in not only identifying

(a) Report unsafe conditions, act, and correct the situation when possible.

(b) Establish a buddy system to keep a safety watch on one another.

(c) Take responsibility for personal safety.

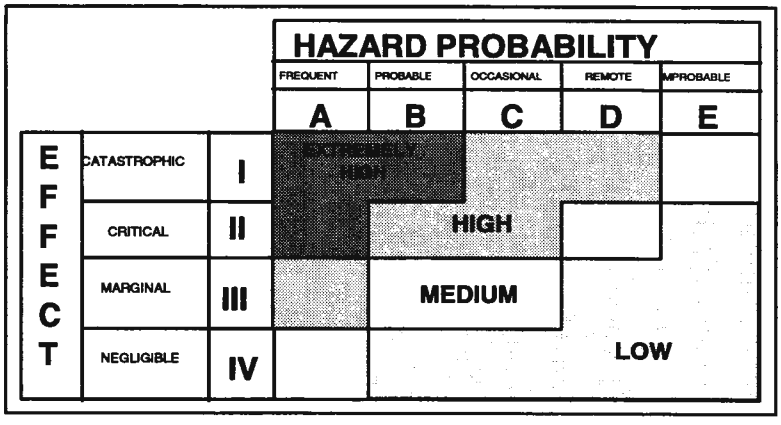

(d) Work as a team member.

(e) Modify own risk behavior.

d. Risk management is a five-step, cyclic process that is easily integrated into the decision making process outlined in FM 101-5. The five steps are--

(1) Identify Hazards. Identify the most probable hazards for the mission.

(2) Assess Hazards. Analyze each hazard to determine the probability of its causing an accident and the probable effect of the accident. Identify control options to eliminate or reduce the hazard. The Army Standard Risk Assessment Matrix (Figure 1-2) is a tool for assessing hazards.

Effect

Catastrophic	Death or permanent total disability, system loss, major property damage.
Critical	Permanent partial disability, temporary total disability in excess of 3 months, major system damage, significant property damage
Marginal	Minor injury, lost workday accident, compensable injury or illness, minor system damage, minor property damage
Negligible	First aid or minor supportive medical treatment, minor system impairment

Probability

Frequent	Individual soldier/item.....Occurs often in career/equipment service life.
	All soldiers exposed or item inventory.....Continuously experienced.
Probable	Individual soldier/item.....Occurs several times in career/equipment service life.
	All soldiers exposed or item inventory.....Occurs frequently.
Occasional	Individual soldier/item.....Occurs sometime in career/equipment service life.
	All soldiers exposed or item inventory.....Occurs sporadically, or several times in inventory service life.
Remote	Individual soldier/item.....Possible to occur in career/equipment service life.
	All soldiers exposed or item inventory.....Remote chance of occurrence; expected to occur sometime in inventory service life.
Improbable	Individual soldier/item.....Can assume will not occur in career/equipment service life.
	All soldiers exposed or item inventory.....Possible, but improbable; occurs only very rarely.

Risk Levels

Extremely High	Loss of ability to accomplish mission.
High	Significantly degrades mission capabilities in terms of required mission standards.
Medium	Degrades mission capabilities in terms of required mission.
Low.	Little or no impact on mission accomplishment.

Figure 1-2. Risk Assessment Matrix.

(3) Make Risk Decisions. Weigh the risk against the benefits of performing the operation. Accept no unnecessary risks and make any residual decisions at the proper level of command.

(4) Implement Controls. Integrate specific controls into operational plans (OPLANs), operation orders (OPORDs), standing operating procedures (SOPs), and rehearsals. Communicate controls to the individual soldier.

(5) Supervise. Determine the effectiveness of controls in reducing the probability and effect of identified hazards to include follow up and after action review. Develop the lessons learned.

e. Fratricide is a component of force protection and is closely related to safety. Fratricide is the employment of weapons, with the intent to kill the enemy or destroy his equipment, that result in unforeseen and unintentional death, injury, or damage to friendly personnel or equipment. Fratricide is by definition an accident. Risk assessment and management is the mechanism with which incidence of fratricide can be controlled.

f. The primary causes of fratricide are--

(1) Direct Fire Control Plan Failures. These occur when units fail to develop defensive and, particularly, offensive fire control plans.

(2) Land Navigation Failures. These result when units stray out of sector, report wrong locations, and become disoriented.

(3) Combat Identification Failures. These failures include gunners or pilots being unable to distinguish thermal and optical signatures near the maximum range of their sighting systems and units in proximity mistaking each other for the enemy under limited visibility conditions.

(4) Inadequate Control Measures. Units fail to disseminate the minimum maneuver and fire support control measures necessary to tie control measures to recognizable terrain or events.

(5) Reporting Communication Failures. Units at all levels face problems in generating timely, accurate, and complete reports as locations and tactical situations change.

(6) Weapons Errors. Lapses in individual discipline lead to gunnery errors, accidental discharges, mistakes with explosives and hand grenades, and similar incidents.

(7) Battlefield Hazards. Unexploded ordnance, unmarked or unrecorded minefields, family of scatterable mines (FASCAM), and booby traps litter the battlefield. Failure to mark, remove, record or anticipate these hazards increases the risk of friendly casualties.

g. Fratricide results in unacceptable losses and increases the risk of mission failure. Fratricide undermines the unit's ability to survive and function. Units experiencing fratricide observe these consequences:

(1) Loss of confidence in the unit leadership.

(2) Increase in self-doubt among leaders.

(3) Hesitation to use supporting combat systems.

(4) Over supervision of units.

(5) Hesitation to conduct night operations.

(6) Loss of aggressiveness during fire and maneuver.

(7) Loss of initiative.

(8) Disrupted operations.

(9) General degradation of cohesiveness, morale, and combat power.

1-9. Environmental Protection. Protection of natural resources has continued to become an ever increasing concern to the Army. It is the responsibility of all unit leaders to decrease, and if possible, eliminate damage to the environment when conducting training. Environmental risk management parallels safety risk management and is based on the same philosophy as safety risk management. Environmental risk management consists of the following steps:

a. Identify Hazards. Identify potential sources for environmental degradation during analysis of mission, enemy, terrain, troops, time available, and civilian considerations (METT-TC) factors. This requires identification of environmental hazards. An environmental hazard is a condition with the potential for polluting air, soil, or water and or destroying cultural and historical artifacts.

b. Assess the Hazard. Analyze potential severity of environmental degradation using environmental risk assessment matrixes (Figure 1-3). Severity of environmental degradation is considered when determining the potential effect an operation will have on the environment. The risk impact value is defined as an indicator of the severity of environmental degradation. Quantify the risk to the environment resulting from the operation as extremely high, high, medium, or low, using the environmental risk assessment matrixes.

c. Make Environmental Risk Decisions. Make decisions and develop measures to reduce high environmental risks.

d. Brief Chain of Command. Brief chain of command (to include installation environmental office, if applicable) on proposed plans and pertinent high-risk environmental matrixes. Risk decisions are made at a level of command that corresponds to the degree of risk.

e. Implement Controls. Implement environmental protection measures by integrating them into plans, orders, SOPs, training performance standards, and rehearsals.

f. Supervise. Supervise and enforce environmental protection standards.

2-2. Mission to Collective Tasks Listing. This listing (Figure 2-2), identifies the missions and their supporting collective tasks. The tasks are listed under the appropriate BOS which are indicated by an **X** in the listing. The BOS used in this listing are defined in TRADOC Pam 11-9. A specific mission is trained by identifying collective tasks in the vertical column for the mission. Based on the proficiency of the unit, training is focused on operational weaknesses.

3-1. General. The mission outline illustrates the relationships between the missions and their supporting tasks. This outline provides the trainer a diagram of the unit mission, example FTX and STXs, and the collective tasks that comprise them.

3-2. Mission Outline. Since unit training is mission oriented, the mission outline shows how task training contributes to the ability of the unit to perform its missions. The mission outline, Figure 3-1, provides the commander with a visual outline of a unit mission in the format that facilitates the planning and management of training.

CHAPTER 4

Training Exercise

4-1. General. Training exercises are used to train and practice the performance of collective tasks. This MTP contains a sample Situational Training Exercise (STX). It is designed to assist in developing, sustaining, and evaluating the unit's mission proficiency. Table 4-1 lists an example STX by title, exercise number, and page number.

TITLE	EXERCISE NUMBER	PAGE
Move	STX 34-3-E0013	4-1

Table 4-1. Situational Training Exercise

4-2 Situational Training Exercise. STXs are short, scenario driven, mission-oriented, tactical exercises that train a group of closely related collective tasks. The STX provides the information for training the tasks that make up the critical wartime mission. The STX does the following important functions:

a. Provides repetitive training on the missions.

b. Allows training to focus on identified weaknesses.

c. Allows the unit to practice the collective tasks before conducting a higher echelon FTX.

d. Saves time by providing a majority of the information needed to develop a vehicle for training.

Move

1. Objective. This example STX trains individual, collective, and leader tasks in the unit. It is used for internal and external evaluations.

2. Interface. This STX supports the company FTX 34-2-E0001, Conduct Company Operations

3. Training.

a. Guidance. The Trainer should review the individual, collective, and leader tasks performed during the STX. Then determine which tasks may require initial or refresher training.

(1) Individual training. Individual training should be soldier's manual tasks required to support this STX. The Individual-to-Collective Task Matrix in Chapter 2 should be used as a source for these individual tasks. Training should be hands-on and performance-oriented. During training, leaders assess soldiers' proficiency by evaluating task performance against the soldiers' manual standards, and provide feedback to the soldier. The individual training and evaluation program includes things such as common task tests and commander's evaluations

(2) Collective training. Collective training should be on the collective tasks required for the STX. Battle/crew drills and STXs are key tools for squad and platoon collective training. As with individual tasks, drills should be trained to standard with feedback provided as required. Collective tasks that could support this STX and mission, as well as other missions, are in the Mission-to-Collective Tasks Matrix in Chapter 2 and the Move outline in Chapter 3.

(3) Leader training. Leader training should be on the leader tasks required for the exercise as well as the individual tasks. Leader tasks are trained in the same manner as stated in paragraph 3(1) or by one or all of the following methods:

(a) Classroom discussion on how to plan the exercise and implement unit SOPs. (FM 25-4, Chapter 2)

(b) Map reconnaissance that assists in terrain analysis and war-gaming. (Use map of the area where the STX will be conducted.)

(c) Terrain board or sand table exercises that permit simulations or miniatures to be used to gain three-dimensional perspective in war-gaming and/or rehearsing the exercise. (Model the terrain board or sand table to match the terrain where the exercise will be conducted).

(d) Tactical exercises without troops allow leaders to train on the ground, practicing land navigation movement, reporting, and other leader actions. (FM 25-4, pages 40 through 44).

(e) Simulations and war-gaming teach leaders as part of a continuing officer and noncommissioned officer development program.

(f) Training extension courses present information and demonstrate how tasks are performed to standard using audiovisual equipment. (DA Pam 350-100)

b. Training tips. Tips for training and general instructions on how to prepare and accomplish the STX are:

(1) Know the requirements for infiltration (FM 7-70, paragraph 3-5), tactical movement (FM 7-70, paragraph 3-2), and consolidation and reorganization (FM 7-70, paragraphs 5-10 and 8-14).

(2) Conduct a leader's reconnaissance of the training area with squad leaders to ensure that you do not make time consuming mistakes.

(3) Review the standards for the T&EOs that support this exercise

(4) The exercise may be conducted with blank ammunition, without ammunition, or live fire. The use of ammunition is encouraged to add more realism to the exercise.

(5) The exercise may be conducted with or without MILES. MILES provides better feedback and should be used if available.

(6) The exercise can be conducted under all environmental conditions, both day and night, with or without NBC. This scenario involves an active NBC environment.

4. General Situation.

a. Contact with the enemy has been reestablished. Initial reports indicate that he is at 65 to 70 percent strength and has not been reinforced. His defensive positions are not well established. He has the capability for indirect fire and close air support. The enemy has used chemicals and will probably do so again. A move is ordered to assist elsewhere. The unit is acting as part of a larger force and has indirect fire available. Figure 4-1 illustrates the graphic scenario of task performance in this exercise.

b. This exercise begins with the receipt of a company FRAGO and ends after consolidation and reorganization. An AAR should be held after completing the reorganization. A final AAR should be conducted once all evaluation notes are compiled. If necessary, run portions of the exercise again until you are satisfied with your unit's performance. Table 4-2 provides a recommended sequence of T&EOs and time for each portion of the STX.

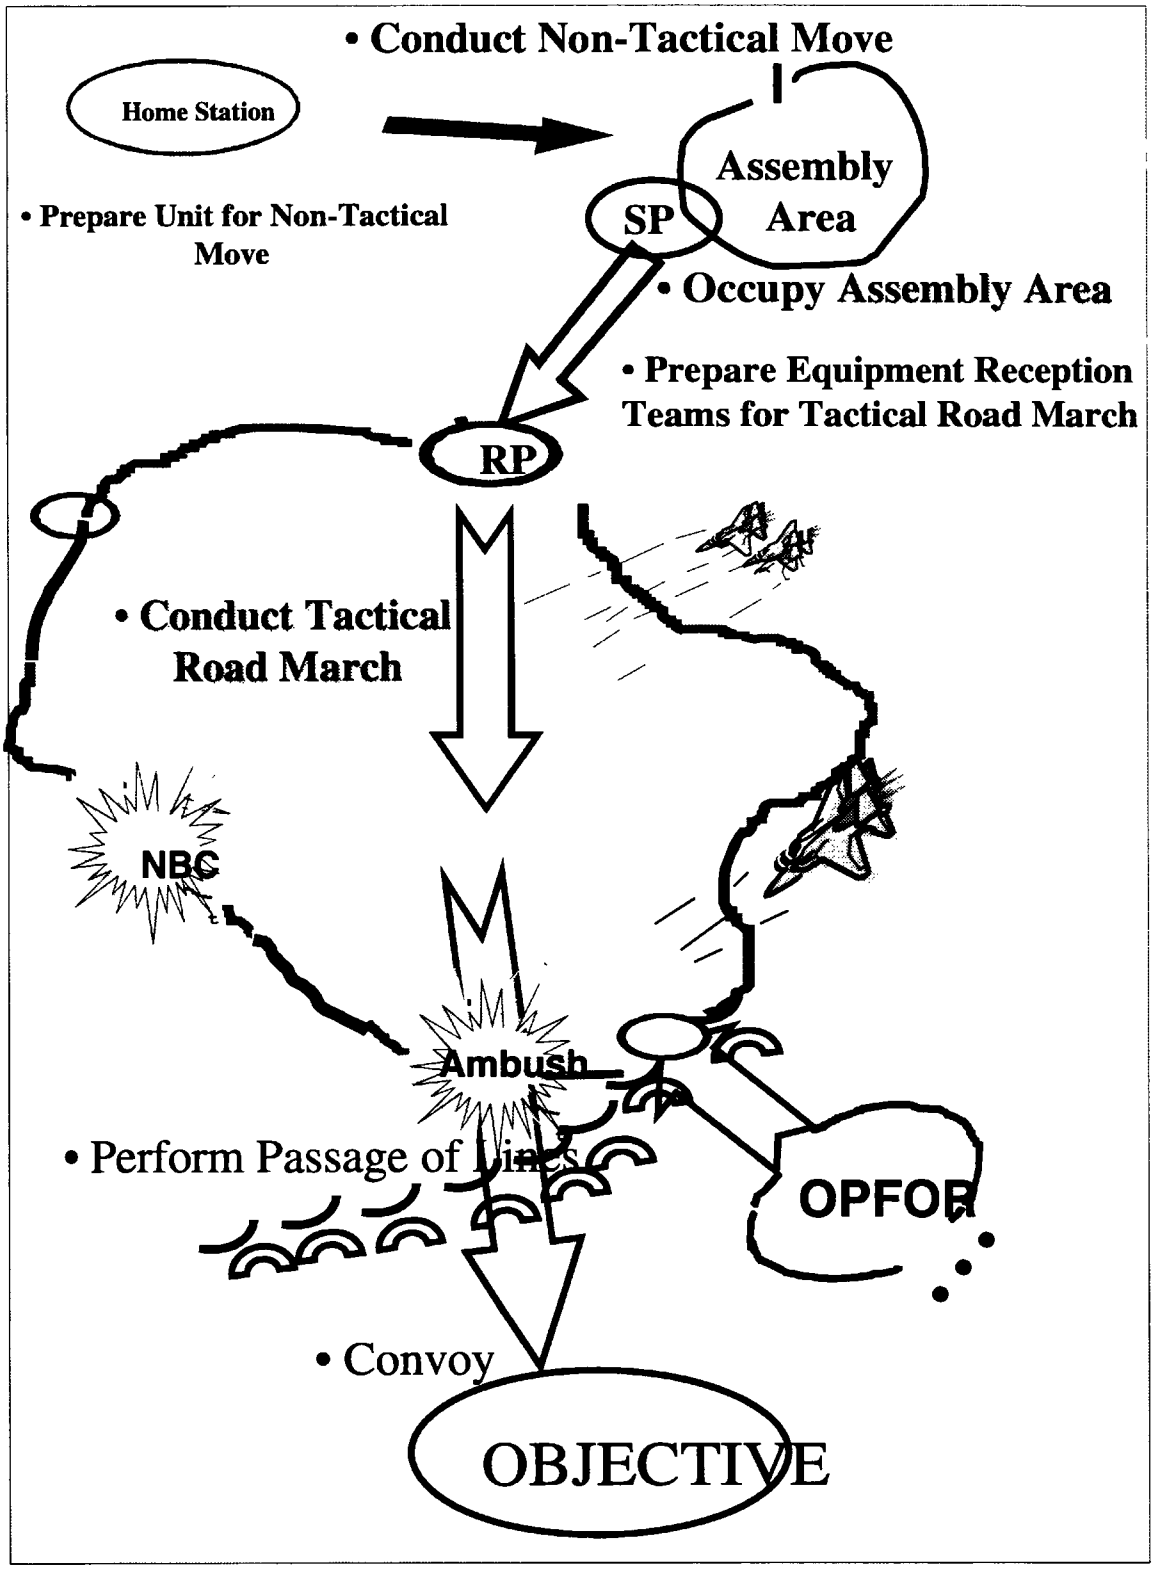

Figure 4-1. General FTX Scenario

SEQUENCE	EVENT	ESTIMATED TIME
1	Administrative Preparations	Pre FTX
2	Perform Risk Management	24 hrs.
3	Receive FRAGO	30 min
4	Conduct Mission Analysis	30 min.
5	Prepare Equipment	1 hr.
6	Occupy Assembly Area	30 min.
7	Issue Movement Order	20 min.
8	Intermediate AAR	30 min.
9	Conduct Non-Tactical Move	1 hr.
10	Intermediate AAR	1 hr.
11	Conduct Tactical Move	1 hr.
*12	React to Ambush	1 hr.
13	Final AAR	2 hrs.

*Indicates these tasks are performed simultaneously with other tasks.

NOTES: Events are trained to standards, not time limitations. The time required to train an event varies based on METT-TC factors and the proficiency of the platoon. Additional time is required if large portions of the exercise are conducted at night, under limited visibility, or under MOPP conditions.

Table 4-2. Sequence of Events and Time for STX

5. Instructions for this STX are as follows:

a. This STX should be initially trained and rehearsed slowly, on open terrain, during good visibility, and with frequent explanations and critiques by leaders. This simple execution, combined with a thorough prebrief and chalk talks, constitutes the "crawl" stage of STX training. The "walk" phase of this STX entails conducting the training at closer to normal rates, on more difficult terrain, and with stops for explanation and critiques only when problems occur (except for planned AARs). The STX is executed under conditions as close to those expected in combat as possible for the "run" phase. The run phase used should be full operational security, camouflage, realistic time frames, distances, challenging terrain, an aggressive OPFOR, NBC environment, and movement distances. This exercise is conducted at full speed after conducting building-block training (individual training, drills) to reach the run level of execution.

b. The T&EO standards for this exercise are in Chapter 5. These standards must be met to obtain the maximum benefits from the training.

c. This exercise should be conducted on a recurring basis to sustain proficiency. However, since many of the T&EOs in this STX will be trained in other STXs, practice may occur through integration rather than retraining the STX.

6. Support Requirements.

a. Ideally, the OPFOR replicates enemy forces in size and strength to realistically portray threat activities. (See Chapter 6).

b. At least one evaluator should be assigned to control OPFOR activities. The evaluator evaluates OPFOR actions, ensures realism, stresses safety, and assesses loss and damage.

c. OPFOR units should look and fight like the potential enemy. This assists soldiers in understanding threat tactics, doctrine, and weapons systems. (See Chapter 6)

d. Minimum trainers/observer controllers: The company commander or platoon leader, who will be the trainer and primary evaluator, can conduct this exercise. At least one other observer controller is required with the OPFOR. Another platoon being trained or evaluated should be used as the platoon making the main attacks. This platoon will need an additional trainer or observer controller.

CHAPTER 5

Training and Evaluation Outlines

5-1. General. This chapter contains the training and evaluation outlines for the unit. T&EOs are the foundation of the MTP and the collective training of the units. T&EOs are training objectives (task, conditions, and standards) for the collective tasks which support critical wartime operations. The unit must master designated collective tasks to perform its critical wartime operations. T&EOs may be trained separately, in an STX, in an FTX, or in live-fire exercises. For collective live-fire standards, the trainer needs to refer to the applicable gunnery manual for the appropriate course of fire. Those standards and courses of fire need to be integrated into the training exercise.

5-2. Structure. The T&EOs in this chapter are listed in Table 5-1. The Mission-to-Collective Task Matrix in Chapter 2 lists the T&EOs required to train the critical wartime missions according to their specific BOS.

5-3. Format. T&EOs are prepared for every collective task that supports critical wartime operation accomplishment. Each T&EO contains the following items:

a. Element: This identifies the unit or element(s) that performs the task.

b. Task: This is a description of the action to be performed by the unit and provides the task number.

c. References. These are in parenthesis following the task number. The reference which contains the most information (primary reference) about the task is listed first and underlined.

d. Iteration. Used to identify how many times the task is performed and evaluated during training. The "M" identifies when the task is performed in MOPP4.

e. Commander/Leader Assessment. This is used by the unit leadership to assess the proficiency of the unit in performing the task to standard. Assessments are subjective in nature and use all available evaluation data and sub-unit leader input to develop an assessment of the organization's overall capability to accomplish the task. Use the following ratings:

(1) T - Trained. The unit is trained and has demonstrated its proficiency in accomplishing the task to standards.

(2) P - Practice Needed. The unit needs to practice the task. Performance has demonstrated that the unit does not achieve standard without some difficulty or has failed to perform some task steps to standard.

(3) U - Untrained. The unit can not demonstrate an ability to achieve proficiency.

f. Condition. A statement of the situation or environment in which the unit is to perform the collective task.

g. Task Standard.

(1) The task standard states the performance criteria that a unit must achieve to successfully execute the task. This overall standard should be the focus of training. It should be understood by every soldier.

(2) The trainer or evaluator determines the unit's training status using performance observation measurements (where applicable) and his judgment. The unit must be evaluated in the context of the METT-TC conditions. These conditions should be as similar as possible for all evaluated elements. This will establish a common base line for unit performance.

h. Task Steps and Performance Measures. This is a listing of actions that is required to complete the task. These actions are stated in terms of observable performance for evaluating training proficiency. The task steps are arranged sequentially along with supporting individual tasks and their reference. Leader tasks within each T&EO are indicated by an asterisk (*). Under each task step are listed the performance measures that must be accomplished to correctly perform the task step.

i. GO/NO-GO Column. This column is provided for annotating the platoon's performance of the task steps. Evaluate each performance measure for a task step and place an "X" in the appropriate column. A major portion of the performance measures must be marked a "GO" for the task step to be successfully performed.

j. Task Performance/Evaluation Summary Block. This block provides the trainer a means of recording the total number of task steps and performance measures evaluated and those evaluated as "GO." It also provides the evaluator a means to rate the unit's demonstrated performance as a "GO" or "NO-GO." It also provides the leader with a historical record for five training iterations.

k. Supporting Individual Tasks. This is a listing of all supporting individual tasks required to correctly perform the task. Listed are the reference, tasks number, and task title.

l. OPFOR Standards. These standards specify overall OPFOR performance for each collective task. These standards ensure that OPFOR soldiers accomplish meaningful training and force the training unit to perform its task to standard or "lose" to the OPFOR. The OPFOR standards specify what must be accomplished--not how it must be accomplished. The OPFOR must always attain its task standards, using tactics consistent with the type of enemy they are portraying.

5-4. Usage. The T&EOs can be used to train or evaluate a single task. Several T&EOs can be used to train or evaluate a group of tasks such as an STX or FTX.

(FM 19-30) (FM 34-35)

ITERATION: 1 2 3 4 5 M (Circle)

COMMANDER/LEADER ASSESSMENT: T P U (Circle)

CONDITIONS: The QUICKFIX flight platoon is organic to and located with the combat aviation brigade or combat aviation squadron. The platoon is providing heliborne intelligence gathering and electronic attack aircraft and personnel for conduct of missions under the operational control of the military intelligence battalion or military intelligence company, armored cavalry regiment, or separate brigade. Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: QUICKFIX personnel intercepted, located, and jammed enemy targets of interest. Reporting was accomplished immediately to the analysis and control element through a ultra high frequency-frequency modulated or very high frequency-frequency modulated voice link.

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
1. The air crew reports to the analysis and control element and receives a mission briefing that: NOTE: For immediate tasking, the flight platoon operations center can receive mission taskings and technical data support from the analysis and control element over the tasking and reporting net. The analysis and control element can also conduct in-flight mission tasking to the signals intelligence crew via ultra high frequency frequency modulated or very high frequency frequency modulated secure communications. a. Identifies the target and target area. b. Designates the operational flight area. c. Establishes time on target. NOTE: Due to refueling requirements of the EH-60A, time on target is critical. The EH-60A is not normally equipped with additional fuel tanks and can maintain, on average, a 2.5 hour mission (including flight to and from the operational flight area). d. Identifies priority requirements. e. Provides technical intercept and jamming data. f. Furnishes reporting requirements.		
* 2. The flight crew plans the mission. a. Considers mission, enemy, terrain, troops-time and civilians. NOTE: The operational flight area is placed just outside the threat's air defense artillery envelope. This ensures maximum survivability of the aircrew and increased mission success. Normally, the operational flight area will be located 20 to 30 kms behind the forward line of own troops for direction finding or intercept operations. Due to different mission requirements in electronic attack operations, the operational flight area will move closer (15 - 20 kms) to the forward line of own troops. b. Plans flight path. NOTE: A figure-8 flight pattern provides the best combination of accuracy and width needed for a good direction finding baseline. The baseline needs to be approximately as wide as the depth of coverage. c. Ensures coordination for airspace has been effected.		
3. Operators perform preflight procedures.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO

COMMANDER/LEADER ASSESSMENT: T P U (Circle)

CONDITIONS: The brigade has received the division operations order. In response, the plans to redeploy the all source analysis system, in conjunction with the remainder of the analysis and control element at the analysis and control element forward/TAC-1 or at the analysis and control team, must be generated. Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: Completeness of planning, for the next tactical move, is rated on a percent of the planning factors in paragraphs 1 through 4 below. These elements comprise 100 percent of the all source analysis system-unique requirements considered. At least seventy (70) percent must have been considered in the first iteration and ninety (90) percent in any follow-on iteration. (Though a planned move of 20-60 km at 20 km per hour may have occurred, conduct of an actual road march was not required since it did not train any unique all source analysis system subtasks or procedures.)

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
* 1. Plan All Source Analysis System (ASAS) set up in a projected site location. Note: This task applies to all ASAS teams in the analysis and control element found in divisions and armored cavalry regiments as well as in the analysis and control team of the Direct Support (DS) MI Companies. a. Identify projected location on map, considering mission, equipment, terrain, troops - time available and ASAS-unique communications connectivity requirements. b. Plan for operational continuity and recovery procedures for the loss of contact with current operations while ASAS relocates.		
* 2. Plan success of the move. (Consider the following in any plan.) a. Deferred maintenance and preventive maintenance. b. Availability of spares and repair parts. c. Inventory of ASAS System. d. Brief personnel on mission and details. e. Load plans vs. march order and emplacement order. f. Requirements for primary and alternate communications paths and associated crypto/keying material to support data exchanges. g. Priority of effort (e.g., power, shelter, communications, etc.).		
3. Reconfigure ASAS for split-based operations/continuity of operations if applicable. a. Set ASAS tables via SysAd. b. Reconfigure local area network.		
4. Conduct tear down procedures. a. Backup files and databases prior to redeployment. b. Disconnect ASAS power cords and communications cables.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
c. Conduct preventive maintenance checks and services on ASAS, uninterrupted power source, peripheral devices, and cables. d. Remove HDD from high capacity unit/Ultrahigh Capacity Unit. e. Inventory ASAS components. f. Pack ASAS line replaceable units and cables in transit cases.

CONDITIONS: The maneuver unit has received the corps operations order. The G2 main and tactical command post or analysis and control team have moved tactically to the vicinity of the new site, which has been established per the unit standing operating procedures. All source analysis system elements have completed the move safely and within given time limits. All deferred maintenance on automation and communications equipment has been completed. Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: The all source analysis system was unloaded and set up in its operational configuration within four hours. Set up was considered complete when more than one user could sign-on to each local area network cluster and the compartmented all source analysis system message processing system was sufficiently operational to establish and test its minimum essential set of linkages, ensuring connectivity between remote work station and higher/adjacent/lower all source analysis system systems.

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO

Note: This task applies to ASAS personnel working in the G2 Tactical Operations Center (TOC) in a division, regimental S2 Section in an armored cavalry regiment, as well as those operating in the analysis and control team of a Direct Support MI Company. Elements within the G2 section may be configured differently and use different ASAS systems. Communication interfaces between the special compartmented information ASAS in the analysis and control element and the collateral remote workstation in the TOC(s) and the analysis and control team are provided by the communications control set. Both ASAS-RWS, Version 4 or Version 6 may be deployed and the operator should be aware not all these systems may be fully compatible nor possess the same tools. a. Identify the new site on the map and consider mission, equipment, terrain, troops - time and ASAS-unique communications connectivity requirements. b. Plan for operational continuity and recovery procedures for the loss of contact with current operations when either the analysis and control element or analysis and control team and their supporting ASAS systems are required to move. 2. Establish the essential set of tactical communications. a. Analysis and control element to subordinate analysis and control teams. b. G2 to adjacent, higher, or subordinate TOCs and/or army battle command systems subsystems. c. TOC to the battlefield command vehicle. d. Analysis and control team to supported brigade remote work station/TOC local area network or subordinate battalion ASAS subsystems (if applicable). 3. Establish remainder of capabilities.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO

TASK: Prepare Crew Served Weapons Fighting Positions (05-5-0302.34-0001)
(FM 7-7) (FM 23-67) (FM 7-20)

ITERATION: 1 2 3 4 5 M (Circle)

COMMANDER/LEADER ASSESSMENT: T P U (Circle)

CONDITIONS: The crew must construct a crew-served fighting position using organic equipment. The location of the fighting position is selected. Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: The crew constructed a crew-served weapon fighting position which provided coverage of the sector of fire and the final protective fire line. It provided protection from direct and indirect fire. The position did not restrict the operational capability of the weapon system. The time required to perform this task is increased when conducting it in mission oriented protective posture-4 (MOPP-4).

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
1. Construct a machine gun position having a primary and secondary sector of fire. Report intermediate status and completion to the squad leader. a. Construct the position so the gun fires to the front or oblique (firing across the unit's front) with the oblique being the primary sector of fire. b. Dig the position in an inverted "T" shape with a firing platform in each corner. c. Use the tripod on the side with primary sector of fire and the bipod legs with the secondary sector of fire d. Use earth removed during construction of the position to provide frontal and flank protection if it does not interfere with sectors of fire. It should be high enough to cover both soldiers when operating the weapon. e. Shape the hole so both the gunner and assistant gunner can get to the weapon. f. Reduce the weapon's height by digging the tripod platform down as much as possible yet keep the weapon traversable across the entire sector of fire. g. When there is a three soldier crew for a machine gun, the ammunition bearer digs a one soldier fighting position to the flank. Connect this position to the gun position by a crawl trench. h. Dig the hole to armpit depth and slope the floor outward toward each end of the hole. i. Dig grenade sumps approximately the width and depth of one entrenching tool at both ends of the hole. j. Build an overhead cover over the middle of the position 18 inches thick when possible. k. If time permits, improve the position by adding cover, digging trenches to adjacent positions, and maintaining camouflage.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
1. Complete the position in seven man-hours without overhead cover, or 12 man-hours with overhead cover. 2. Construct a machine gun position without a secondary sector of fire. Report intermediate status and completion to the squad leader. a. Dig the position in a "V" shape with the firing position in the apex of the "V". b. Construct the position following procedures in subtasks 1.d to 1.k. Complete it in six man-hours without overhead cover, or 11 man-hours with overhead cover.

(FM 44-8) (FM 44-30)

ITERATION: 1 2 3 4 5 M (Circle)

COMMANDER/LEADER ASSESSMENT: T P U (Circle)

CONDITIONS: Unit receives early warning of aerial platforms (rotary-wing, fixed-wing, unmanned aerial vehicles) in the area. Unit personnel detect unknown or hostile aerial platforms (rotary-wing, fixed-wing, unmanned aerial vehicles). Unit is in a tactical environment at weapons control status of "Weapons Tight." Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: Unit destroyed or forced the attacking aerial platforms (rotary-wing, fixed-wing, unmanned aerial vehicles) away from friendly positions.

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
* 1. Direct combined arms air defense measures against hostile aerial platforms not attacking a stationary unit. a. Give air attack alarm. b. Occupy defensive positions. c. Search assigned sectors for aerial platforms. d. Identify and report presence of aerial platforms in the area and send report to higher headquarters (follow-up). NOTE: When making the decision of whether or not to fire at non-attacking hostile aerial platforms with small arms, take into consideration the assigned mission and tactical situation. Unit must positively, visually identify aerial platforms prior to engaging with small arms unless the aircraft is committing a hostile act. DANGER: Munitions cannot distinguish between friend and foe. Review all airspace control measures. You must perform all precautionary measures to ensure the munitions you fire do not cause injury or death to friendly forces or damage to allied equipment. Even computerized systems require close observation. e. Leader makes engagement decision. f. Unit engages the aerial platforms with all available small arms (rifles and machine guns). NOTE: Expect the firing signature from small arms to disclose unit position. g. Engagement causes no fratricide. h. Reload weapons following engagement.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
NOTES: (1) Aim points for propeller-driven aircraft are the same as for helicopters. (2) Select aim points in football field lengths: one football field equals approximately 91 meters. (3) Once the lead distance is estimated, the riflemen and machine gunners aim and fire their weapons at the aim point until the aircraft has flown past that point. Maintain the aim point, not the lead distance. The weapon should not move once the firing cycle starts. (4) Establish preselected aim points when the unit is in a static position. (5) Accuracy in relation to target hits is not necessary. Accuracy in relation to the aim point is necessary. Volume fire, a coordinated high-volume of fire the aircraft has to fly through, will achieve the desired results.

i. Evaluate situation and move unit position as directed by the unit commander.		
* 2. Direct small arms air defense measures against hostile aerial platforms not attacking a moving target. a. Give air attack alarm. b. Disperse vehicles laterally and in-depth, or vehicle operators continue to move the unit. c. Move vehicles to covered, concealed positions. All personnel not assigned crew-served weapons dismount and prepare to engage the aircraft or increase dispersion. d. Engage non-attacking aircraft only as directed. e. Visually identify threat aerial platforms. f. Report all aerial platform actions to higher headquarters. g. Senior leader orders the unit to engage. h. Engage the aerial platforms with all available small arms. i. Reload weapons following engagement of aircraft.		
* 3. Direct combined arms air defense measures against aerial platforms attacking stationary unit. a. Give air attack alarm. b. All available personnel immediately engage attacking aerial platforms per tactical standing operating procedures. c. Reload weapons following the engagement. d. Personnel assigned observation posts continue to scan their assigned sectors. e. Report any aircraft action to higher headquarters. f. Report casualties to higher headquarters.		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO

NOTE: Safety is a part of realism... and realism includes building safety into training so that safe practices, which eliminate accidents, become second nature during war. FM 100-5 emphasizes the need for boldness and that commanders must take "risks and tenaciously press soldiers and systems" as an imperative. However, such an imperative is founded on the premise that protecting the force to the maximum possible ensures winning the battle.

TASK: Conduct Troop-Leading Procedures (17-3-0065.34-0001)

ITERATION:	1	2	3	4	5	M	(Circle)
COMMANDER/LEADER ASSESSMENT:			T	P	U		(Circle)

CONDITIONS: The platoon has received an OPORD/FRAGO/WARNO from the commander. It has a map with overlays, graphic control measures and applicable standing operating procedures. The order specifies the time of movement and describes the enemy situation. The platoon has conducted linkup with any attachments. Time is available to conduct troop-leading procedures. Some iterations of this task should be performed in MOPP4.

TASK STANDARDS: The platoon was prepared to move by the time specified in the order with operational weapons, equipment, and basic load of supplies as specified by the order/platoon leader. All personnel could explain the higher unit mission, the higher commander's intent, the platoon mission, and their specific tasks and duties to support the mission. All attachments were received, briefed, and inspected.

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
NOTE: The format used in this training and evaluation outline (T&EO) to outline task steps and performance measures parallels the eight steps of troop-leading procedures. Steps are generally conducted concurrently rather than sequentially. In addition, troop-leading procedures must be adapted to the factors of mission, enemy, troops, terrain, time available, and civilian considerations (METT-TC) that affect the platoon's area of operations, especially the time available for planning and preparation. The platoon leader may have to abbreviate, combine, or even eliminate steps as the situation dictates. Although the platoon leader holds ultimate responsibility for troop-leading procedures, the platoon sergeant (PSG) assists with and/or conducts many activities within the process. * 1. Platoon leader/PSG receives and analyzes the mission. a. Receives the mission from the commander. (1) Obtains clarification of all aspects of mission from the commander (commander's intent/implied tasks). (2) Coordinates with higher headquarters, adjacent units, and combat support elements (including sensor support). (3) Disseminates all pertinent information contained in the WARNO, and/or disseminates initial WARNO as quickly as possible. b. Analyzes the mission. (1) Conducts initial METT-TC analysis, focusing on mission and time requirements. NOTE: Refer to performance measure 3b for details of METT-TC analysis. (2) Develops reverse planning schedule to ensure all tasks can be accomplished. NOTE: Platoon leader/PSG use approximately 1/3 of available time for planning, to include issuing the OPORD. They allocate the remaining 2/3 time to vehicle commanders to plan and prepare for the upcoming mission. * 2. Platoon leader/PSG/section leaders issue the WARNO(s), including, at a minimum, the following information:		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
NOTE: The platoon leader or PSG issues the initial WARNO as soon as possible after receiving the mission so vehicle commanders/section leaders can start their planning and preparation. He issues subsequent WARNOs as more information becomes available or as the situation changes. a. Task organization of the platoon; b. Situation; c. Operational graphics; d. Time and nature of the operation; e. Intelligence/human intelligence objectives; f. The earliest time of movement; g. The time and place the OPORD will be issued; h. Delegation/assignment of preparatory tasks to the platoon leader, PSG, vehicle commanders, and section leaders. These include, but are not limited to, the following; (1) Graphics production. (2) Development of terrain model. (3) Coordination requirements. (4) Combat service support requirements. (5) Precombat checks and inspections. (6) Rehearsals. * 3. Platoon leader makes a tentative plan. NOTE: The scope of the platoon leader's activities in this troop-leading step is directly affected by the amount of detail and instruction in the commander's OPORD. The OPORD normally will specify the platoon plan and maneuver requirements. The platoon leader is then responsible for analyzing the commander's plan and scheme of maneuver and adapting them to the platoon level. However, the platoon leader must be prepared to develop his plan with a minimum of information and direction from the commander. This involves a detailed METT-TC analysis (as outlined in performance measure 3b of this T&EO) and development of platoon tasks and courses of action (COA). a. If the commander's OPORD specifies the platoon plan, reviews and analyzes platoon tasks as developed in the commander's scheme of maneuver. (1) Reviews the platoon's role in the scheme of maneuver in relation to the factors of METT-TC. (2) Identifies critical METT-TC considerations that affect the platoon plan. NOTE: These considerations may have been addressed in the OPORD. (3) Based on METT-TC considerations, identifies deficiencies and/or issues in the plan and reports them to the commander. (4) Adjusts reverse planning schedule as required. OR b. If the commander's OPORD does not provide a detailed platoon plan/scheme of maneuver and time is available, conducts a detailed METT-TC analysis. (1) Platoon leader performs mission analysis and identifies the following: (a) Mission and intent of the commander two levels up; (b) Specified tasks; (c) Implied tasks. (2) Platoon leader performs enemy analysis and identifies the following: (a) Current and/or probable enemy locations; (b) Enemy's composition and capabilities;		

TASK STEPS AND PERFORMANCE MEASURES	GO	NO-GO
(c) Enemy's most probable COA. CHAPTER 6

External Evaluation

6-1. General. Evaluations are conducted to evaluate the unit's ability to perform its mission. This chapter is a guide for preparing evaluations. Using units may modify the evaluation, based on METT-TC and other considerations as deemed appropriate by the commander. Selected T&EOs in Chapter 5 are used for evaluation which involves the total unit, employs a realistic OPFOR and the use of MILES. At the end of the evaluation, the commander can identify the strengths and weaknesses of his unit. These strengths and weaknesses are the basis for future training and resource allocations.

6-2. Preparing the Evaluation. The commander must standardize evaluation procedures to accurately measure the unit's capabilities.

a. Preparing the evaluation instrument. The scenario the unit selects contains the missions as well as the appropriate tasks necessary to develop the scenario and execute the evaluation. Selective tailoring is required because it is not possible to evaluate every task. The following procedures are suggested for developing the evaluation:

(1) Identify the missions to evaluate for each echelon or element. Record the selected missions on a Unit Proficiency Worksheet, Figure 6-1.

(2) List each mission on a Task Summary Sheet, Figure 6-2.

(3) Select the tasks to evaluate for each mission. List the selected tasks on the Task Summary Sheets.

(4) Compile the selected missions and tasks in the order they logically occur in the detailed scenario. Group the selected mission and tasks in parts for continuous operations for a sample evaluation scenario. Parts can be interrupted at logical points to assess MILES casualties and conduct in-process AARs.

b. Forecasting the requisitioning resources. Adequate training ammunition, equipment, and supplies must be forecast and requisitioned. The evaluating HQ will prepare its own consolidated support requirements.

c. Selecting and preparing the field evaluation site. Required size, type of terrain, OPFOR requirements, and the administrative requirements are the basis for site selection. The OPFOR is positioned according to threat doctrine. The site must provide space for the administrative area required to support the evaluation.

d. Planning indirect fire simulation. Because it greatly influences the outcome of battles, reaction to indirect fire is an important consideration of the evaluation. Indirect fire simulation requires considerable planning to achieve realism.

(1) The fire marker control system outlined in TC 25-6 is a recommended method of simulating indirect fire. Due to the amount of required resources, this method may be difficult to support.

(2) The commander may use the evaluation control HQ method or the simulation without OPFOR method to evaluate the unit's ability to react to indirect fire. If the evaluation control HQ method is used, the OPFOR will initiate a call for fire to the evaluation control HQ which will simulate a tactical Fire Direction Control (FDC). The evaluation control HQ would then relay the delivery data to an OC who would mark the impact of the rounds with artillery simulators and assess appropriate casualties. If an OPFOR is not used, the O/C may ignite artillery simulators and observe the unit's reactions. The FM 25-Series provides assessment and computation tables which can be used to determine casualties. Indirect fire simulation must be realistic and limited to what the unit could reasonably expect under combat conditions.

Figure 6-2. Example Task Summary Sheet.

6-3. Selecting and Training the Observer Controllers (OC).

a. O/Cs must know the unit's missions, organization, equipment, and employment. Senior O/C should be at least equal in rank to the unit commander and have successfully performed in that specific or similar command position.

b. The following are minimum rank and experience requirements for O/Cs:

(1) Company O/C will be an officer with company command experience.

(2) Platoon or section O/Cs will be LT or NCO with platoon or section experience.

(3) Recorder will be an officer or NCO at the evaluation control headquarters who receives "kill" information or results and time data from the O/Cs.

c. O/Cs standardize administration of the evaluation by understanding the following functional areas:

(1) Evaluation Design. Each part is designed to evaluate specific missions or tasks within the overall scenario. O/Cs must thoroughly understand the evaluation and correctly implement it.

(2) MILES. Each O/C, regardless of position, must have full knowledge of the unit's weapons and vehicles and must also thoroughly understand the MILES system being used. The unit commander is responsible for ensuring that all MILES equipment is functional before each part of the scenario.

(3) Evaluation Control System. This system ensures that the evaluation is administered in a consistent and standardized manner and that correct data is collected for the final evaluation. It includes the following elements:

(a) Rules of engagement.

(b) O/C duties and responsibilities.

(c) Communication systems.

(d) Evaluation data collection plan.

6-4. Selecting and Training the OPFOR. The selection and training of the OPFOR is crucial to the success of a standardized evaluation. The OPFOR provides one of the control measures that influences the conditions under which the evaluation is administered. The unit should face an opponent who realistically resembles the threat in strength, weapons, and skill.

a. Selection. Any qualified Skill Level 1 or 2 soldier can serve as OPFOR. Ideally, they should be a small cohesive unit under the control of their leader or commander.

b. Training. The OPFOR must understand the following six major areas:

(1) Installation and operation of the MILES devices.

(2) Rules of engagement.

(3) Threat small unit tactics.

(4) Training scenarios.

(5) OPFOR weapons and equipment, if available.

(6) Safety.

c. OPFOR Strength.

(1) Offense. Using MILES, the unit should outnumber the OPFOR three to one if an attack is to be successful. If the OPFOR is stronger than this ratio, only the most exceptional unit will be successful. They must be armed with weapons capable of defeating any of the unit's assets. As a general rule, the OPFOR should be strong enough to offer the unit a realistic challenge, but one that the unit can defeat when proper tactics are employed.

(2) Defense. The OPFOR, at a minimum, should have a three-to-one ratio of superiority, because anything less will not have sufficient weapons and ammunition to conduct a successful attack. They must be more than merely a series of targets to be destroyed. The OPFOR should be allowed to plan their own attack for each mission and not be forced into a "canned" attack that all units will quickly defeat. Once the OPFOR establishes their plan, they must use the same plan for all other like units for that event in order to maintain the objectivity and standardization of the evaluation.

6-5. Conducting the evaluation. Evaluations are divided into three distinct areas. Each area requires a different degree of preparation and coordination.

a. Preevaluation.

(1) The senior O/C and all other O/Cs must recon the evaluation area to know the unit's boundaries, disposition of the OPFOR, and the most likely avenues of approach throughout the field evaluation site's area of operation.

(2) The unit must prepare an OPORD and FRAGO to control the exercise. An order is prepared for each mission in the evaluation scenario. These can be prepared by using the skeleton orders contained in the STXs contained in Chapter 4.

(3) Unit preparatory activities include installation and troubleshooting of MILES equipment, loading vehicles, conducting inspections, and performing other logistics and administrative actions, as required.

(4) The OPFOR is placed in position and briefed while the unit is conducting its preparatory activities.

(5) In this evaluation scenario, the unit is issued a movement order to move to an assembly area. When the assembly area has been occupied, the OPORD is issued. The O/Cs should make an equipment functions check after the unit occupies the assembly area and after the unit leaders have issued their instructions.

b. Evaluation.

(1) The evaluation team controls the evaluation in two ways. First, it uses measures established in both the movement order and in paragraphs 3 and 5 in the OPORD or FRAGO. Second, the team controls the evaluation through the team commander (simulated by the senior O/C for this evaluation), on the team net. The team does not control in the traditional sense, instead it accompanies the unit as observers. Only the senior O/C has direct verbal contact with the unit commander. All other O/Cs do not speak to, aid, advise, point out positions, or in any way influence the unit's performance, except for a possible or actual safety issue or emergency. O/Cs are neutral throughout the evaluation.

(2) Once the senior O/C issues the OPORD and movement order, the unit commander executes the events and actions prescribed in the first part of the evaluation scenario within the estimated time. From this point on, all successive parts begin with a FRAGO.

(3) The senior O/C terminates a part when the unit has completed all the events and actions in a particular area or has suffered so many casualties or damage that the part cannot be completed. The O/C must record the reasons for the termination in the margin of the O/C's Task Summary Sheets and report his action to the evaluation control headquarters. In the sample evaluation scenario, the completion of each event or action is indicated by "conducting sustainment operations". During this period, the senior O/C will direct the unit to remain in position while "replacements" (personnel and equipment designated as killed or destroyed), are sent forward to reconstitute the unit. At this time, O/C must perform the following actions:

(a) Inspect all MILES equipment, record "kill" codes and reset equipment. Any damaged or inoperative MILES equipment is replaced.

(b) Resolve all casualty data to determine the time, place, number, and cause of casualties. This information is reported to the recorder in the evaluation control headquarters.

(c) Debrief the unit to resolve questions. Afterwards, the senior O/C directs the unit to continue its mission after it receives a FRAGO or OPORD for the next part.

(4) These guidelines should be followed by the O/Cs.

(a) Report major "kills" (vehicles, groups).

(b) Report major weapons fired. Together with reporting major kills, this is the best method for determining direct fire effectiveness. Both significant firings and hits are reported to the evaluation control headquarters.

(c) Enforce rules of engagement.

(d) Observe critical tactical events of time. O/Cs must spot and record any action that might have an effect on later performance or mission outcome.

(e) Record travel routes and unit's location.

(f) Inform OPFOR controllers of the unit's location, direction, and intent. This is necessary to enable OPFOR action to be controlled in accordance with the desired sequence of events.

(g) Enforce safety.

(h) Terminate mission.

c. Postevaluation. After the evaluation is terminated, the unit moves to an assembly area and performs the following actions:

(1) The unit O/C debriefs subordinate O/Cs and compiles all data (evaluator packets), for the evaluation.

(2) The unit O/C must complete the task summary sheets.

(3) The unit O/C must turn in all completed O/C packets (with the O/C scoring system), to control headquarters for recording and analysis.

(4) The unit O/C must conduct an AAR of the unit's performance.

(5) Each element O/C should conduct an AAR of his element's performance.

6-6. Recording External Evaluation Information.

a. The evaluating HQ develops the data recording instruments for the OCs. The Unit Data Sheet, Figure 6-3, documents demographic information which may reflect on a unit's performance. The Environmental Data Sheet, Figure 6-4, documents weather information in order to compare missions under differing environmental conditions. The Personnel and Equipment Loss Report, Figure 6-5, documents information that may affect the unit's degree of success during engagements with the OPFOR.

b. The senior O/C has the overall responsibility for preparation of the external evaluation. This evaluation is based on his own findings and his subordinate O/C's input. Subordinate O/Cs use the task evaluation criteria (T&EO from Chapter 5 and Task Summary Sheets), to determine overall proficiency in their particular areas. The senior O/C compiles the external evaluation results as prescribed by the evaluating commander. Deviations from the task standard assessed by the company O/C may be addressed in the senior O/C comments portion of the Unit Proficiency Worksheet.

6-7. After Action Reviews.

a. General. At the completion of each evaluation part, the AAR leader provides feedback to the unit in order to increase and reinforce learning.

b. Feedback. Because all members of the unit participate in an AAR, each member becomes a source of feedback. This provides a richer "data base" for key points. The AAR leader will draw information from each member which becomes an important part of the discussion. This information is the basis for discussing alternate courses of action.

c. Preparing the AAR. AAR preparation involves five steps:

(1) Review training orders and objectives. Training objectives are the focus of the discussion of the exercise results. The FRAGOs and OPORDs included in the exercise design implement these objectives. The O/C should be familiar with the objectives, FRAGOs and OPORDs so that he can note orders given by leaders of the evaluated unit and its subordinate elements that either implement these objectives or deviate from them.

(2) Observe the exercise. This is an active process. The emphasis is on noting those actions that make the difference between the unit's success or failure. The O/C does not need to remain close to the unit leader, since more can be seen from high ground near the lead element's location or along the unit's route of march. Because unit orders identify important activities and checkpoints, the O/C must be present when the commander issues the order. The O/C should position himself where he can best observe anticipated critical events. Examples of critical events include:

(a) Conducting a road march.

(b) Crossing a radiologically contaminated area.

(c) Performing unit supply operations.

(d) Responding to an NBC attack.

(3) Select the site and assemble the participants. After the exercise, select a site for the AAR. If possible, hold the AAR where the majority of action occurred, where most of the critical events took place (normally where the OPFOR was positioned), or where the terrain can be observed. Usually, the OPFOR or unit objectives are suitable for assembling the players and conducting the AAR.

(4) Debrief the O/Cs. While the units are moving to the selected site, the O/Cs should be debriefed. The senior O/C must have a complete understanding of what happened in the exercise. The fourth step in AAR preparation is to obtain a detailed description of the exercise's events in the order in which they occurred.

(5) Review the events. After the senior O/C has a sound understanding of what happened during the exercise, he reviews the events which are ranked in terms of their relevance to the training objectives and their contributions to the exercise outcome. He selects as many events as can be covered in detail during the time allowed for the AAR and places them in chronological order.

d. Conducting the AAR. Conducting the AAR requires five steps:

(1) Organize the participants. When the O/C and AAR leader assembles the participants, he groups them according to their organization in the exercise. Each subordinate element's O/C is with the element for which he is responsible.

(2) State the training objectives. The AAR leader makes a brief statement of the training objectives for the exercise. These are described as specifically as possible. He states any additional teaching points that he intends to cover during the AAR. These should be limited to three or four key points in order to keep the AAR focused and prevent it from becoming excessively long.

(3) Lead the discussion. The AAR leader guides the discussion of the events in their order of occurrence. Diagrams help players visualize the exercise development. The AAR leader starts by sketching the main terrain features and, as the AAR proceeds, have the participants draw routes of advance, objectives, and locations of engagements. Each event is discussed in detail to make teaching points about the unit's performance during the event. In an effective AAR, the AAR leader should:

(a) Avoid giving a critique or lecture.

(b) Guide the discussion by asking leading questions.

(c) Suggest the players describe what occurred in their own terms.

(d) Suggest the players discuss not only what happened, but how it happened and how it could be done better.

(e) Focus the discussion to ensure that important tactical lessons are made explicit.

(f) Relate events to subsequent results.

(g) Avoid detailed examination of events not directly related to major training objectives.

(h) Encourage the participants to use diagrams to illustrate teaching points and to show routes, phase lines and objectives.

(i) Prohibit players form offering self-serving excuses for inappropriate tactical actions.

(4) Review the sequence of the events associated with the hazards of the risk assessment made prior to the exercise.

(a) Were effective controls put in place to avoid accidents.

(b) Was training realism reduced through artificial control measures.

(c) Were all participants aware of hazards down to the lowest level.

(d) Did any hazard present itself that was not identified, and what was done to overcome it.

(e) Discuss each incident of fratricide or near fratricide and how it can be avoided in the future.

(5) Summarize key points. The AAR leader briefly summarizes teaching points in terms of training objectives covered in the AAR. After the summary, he can have a private conversation with the unit commander regarding his strengths and weaknesses, and what he can do to improve his performance and that of his unit. A good AAR leader:

(a) Maintains order and discipline.

(b) Reviews the training objectives.

(c) Addresses important events are as they occurred and how the unit could have done them better. During the discussion, the leader avoids a detailed examination of events not directly related to the training objective.

(d) Traces the chain of events so all participants understand the results of mistakes. One mistake is often the partial cause of another.

(e) Clearly relates tactical events to teaching points.

(f) Involves participants in the discussion.

(g) Clearly and concisely gives summary and new training objectives.

(h) Reinforces points by using sketches, diagrams, or terrain models in the AAR.

e. Reference materials for conducting an AAR are TC 25-6, TC 25-20, and FM 25-101.

APPENDIX A - COMBINED ARMS TRAINING STRATEGY

1. Unit Training Strategies. This appendix explains the strategy organization and how to use it. The unit training portion of the Combined Arms Training Strategy (CATS) is a series of separately generated training strategies. CATS are designed to be descriptive, not prescriptive training strategies for commanders. These strategies describe the events, frequencies, and prerequisite gates recommended to train to standard. As part of the unit training strategy development process, TRADOC established a standard format to depict unit training strategies. The unit training strategy is a descriptive strategy for training and sustaining soldier and collective task proficiency. The tasks to be trained are based on the unit's METL and commander's assessment. Unit CATS can be found on the Internet at www-dcst.monroe.army.mil/wfxxi/cats.htm.

2. Using the Combined Arms Training Strategy Matrices. Generally, the leader using the matrices for planning will have a METL (or other list of critical tasks in which his unit must be proficient) and will be looking for guidance about appropriate training methods. The key to using CATS for unit training management is understanding the strategy and its various components. The strategy is organized by functional area and echelon to be trained. It has eight interactive components, expressed as columns in a matrix format. An example matrix for one mission/task is at Table A-1.

- **Task:** This is the CATS task selection for the element to train in support of the battlefield mission listed above the Table.
- **Supporting Tasks:** This is a list of those MTP collective T&EOs that the element must attain and sustain proficiency in to support the CATS task selection and mission.
- **Frequency:** This indicates the interval and number of times a year that this CATS task selection should be trained in order to attain and sustain T1 combat readiness.
- **Types of Events:** This suggests a training event or events (from Classroom training to an Exeval FTX) that the unit can use to train the task.
- **Training Audience:** This indicates the unit elements and/or individuals that this CATS task selection is designed for.
- **Means (Event) (TADSS):**??This entry further describes this training event by selecting from the Types of Events that this CATS Task Selection is designed for.
- **Title:** This is the title of the training event, as it might be depicted in a unit training schedule), for the CATS task selection.

- **Estimated Duration:** This depicts the suggested duration of the training event in hours (in this case Sergeant's Time training).

- **Replication of Conditions (A-D):** This entry shows a means quality rating, related to the cost and realism of the event/medium. When choosing events and media, you will have to balance the resource costs of different training media against the needs for realism and repetition. Generally, as your unit becomes more proficient, realism should increase.

  - An "A" level means is identified as a CTC deployment and training activity.

  - A "B" level means is described as a well assigned home station training exercise.

  - A "C" level means is described as a partial task training exercise.

  - A "D" level means is described as a subtask training exercise.

- **Multi-echelon Training:** This is the simultaneous conduct of different exercises by the unit, or the training of different tasks by elements of the unit. Multi-echelon training occurs whenever collective training is conducted (FM 25-100). Units should structure events to allow the integration of required task training and proficiency (through gate tasks) by each element of the audience and, to permit vertical linkage of unit training strategies.

- **Critical Training Gates:** These gates facilitate efficient use of training time and other resources during scheduled events. They provide those tasks critical to effective and safe training.

- **Resources:** This identifies to the training and resource manager the Class III, VI, and VII resources expended as a cost of the training event.

- **Comments:** The purpose of this section of CATS is to provide descriptive guidance on the purpose of the task selection, the expected outcome of the training event, and execution guidance.

  - **Purpose Statement:** A description of the rationale for including the event in the overall training strategy for the task. It also provides the basis for describing the event's training objectives.

  - **Outcome Statement:** A description of the event in terms of proficiencies that the unit should achieve by training in the event. The outcome is described by the endstate proficiency in tasks trained.

  - **Execution Guidance:** A description of information and coordinating instructions related to training the task (task selection) in the event.

OUTCOME: All team, section, or platoon personnel can perform common tactical movement and assembly area tasks.

EXECUTION GUIDANCE: Sergeant's Time is used by NCO leaders, as required, for initial training, refresher training, and/or sustainment training to gain and maintain proficiency in tactical movement and assembly area tasks the leader singles out for concentrated attention. Typically, Sergeant's Time training is conducted at the team, section, or platoon level, 4 hours weekly, on a variety of METL, common, and MOS specific tasks. The NCO identifies specific tasks to be trained, participating personnel, and frequency of training based on personnel turnover and a training assessment. Relevant Army doctrinal and training publications and the unit TSOP provide detailed information on the tasks, conditions, and standards used in organizing this training. Whenever possible, Sergeant's Time should be "hands on" performance-oriented exercises employing the systems, equipment, and communications necessary to accomplish the assigned tasks. NCOs should tailor conditions to the appropriate level of training, adding progressively more difficult conditions to increase the challenge as proficiency increases. The three stages of training (initial training, refresher training and sustainment training) can occur separately or in combination, with soldiers and units progressing to sustainment training as soon as standards are met.

APPENDIX B- BATTLEFIELD OPERATING SYSTEMS

A commander uses the BOS to organize battle tasks. The seven BOS are the major functions that occur on the battlefield. The BOS must be synchronized to ensure total combat power is coordinated and directed toward accomplishing the wartime mission. They may be used to identify operational deficiencies and focus attention on training.

All BOS are not equal in all operations, nor do they apply for all tasks. BOS are listed in sequence as they would appear in the five-paragraph field order:

1. Intelligence. Knowledge of the enemy, weather, and geographical features required by a commander in planning and conducting combat operations. It is derived from an analysis of information on the enemy's capabilities, intentions, vulnerabilities, and the environment.

a. Collect information. To obtain information in any manner.

b. Process Information. To convert information into intelligence through collation, evaluation, analysis, integration, and interpretation.

c. Prepare Intelligence Reports. To develop and produce standard reports and Intelligence Preparation of the Battlefield products for the commander's use to report intelligence or information; to task intelligence assets; or to receive information, intelligence orders, or instructions.

2. Maneuver. The employment of forces on the battlefield through movement and direct fire in combination with fire support or fire potential, to achieve a position of advantage, in order to accomplish the mission. This includes direct fire systems (e.g., small arms, tank guns, and attack helicopter fires).

a. Move. To position or reposition forces (units and equipment) relative to the enemy to secure or retain positional advantage making full use of terrain and formation. It is the dynamic element of combat--the means of concentrating forces at the critical point to achieve the surprise, psychological shock, physical momentum, and moral dominance which enables smaller forces to defeat larger ones. Units supporting combat maneuver units are included since they are expected to go wherever the combat units go. NOTE: Movement of cargo, equipment, and personnel is covered under the Combat Service Support BOS.

b. Engage Enemy. To enter into conflict or combat on the ground with the enemy using direct fire or close combat. NOTE: Air targets are covered in the Air Defense BOS.

c. Control Terrain. To dominate an area to prevent enemy occupation of the position through fire, fire potential, or occupation of the terrain.

3. Fire Support. The collection and coordinated use of target acquisition data, indirect fire weapons, armed aircraft (less attack helicopters), and other lethal and nonlethal means against ground targets in support of maneuver force operations. It includes artillery, mortar, and other non line-of-sight fires, naval gunfire, Combat Aviation Squadron, and electronic countermeasures.

a. Process Ground Targets. To select targets and match the appropriate response to them, taking account of operational requirements and capabilities.

b. Engage Ground Targets. To enter into conflict with the enemy using fire support systems.

c. Integrate Fire Support.

4. Mobility, Countermobility, and Survivability. The capability of the force that permits freedom of movement, relative to the enemy, while retaining the ability to fulfill its primary mission. It also includes those measures the force takes to remain viable and functional by seeking protection from the effects of enemy weapons systems and natural occurrences.

a. Provide Mobility. To provide freedom of movement for personnel and equipment on the battlefield without delays due to terrain or obstacles.

b. Provide Countermobility. To delay, channel, or stop offensive movement by the enemy in order to destroy his forces directly or indirectly by enhancing the effectiveness of friendly indirect and direct weapons systems.

c. Enhance Survivability. To protect personnel, equipment, and supplies from enemy systems and natural occurrences while simultaneously deceiving the enemy.

5. Air Defense. All measures designed to nullify or reduce the effectiveness of attack by hostile aircraft or missiles after they are airborne.

a. Processing Air Targets. To select targets and match the appropriate response to them, taking into account operational requirements and capabilities.

b. Attack Enemy Air Targets. To intercept, engage, destroy, or neutralize enemy aircraft and missiles in flight.

c. Deny Airspace. To prevent enemy use of airspace through fire potential or other means without direct attack of air targets (e.g., deliberate smoke, barrage balloons).

d. Integrate Air Defense Fire.

6. Combat Service Support. The support and assistance provided to sustain forces, primarily in the field of logistics, personnel services, and health services.

a. Arm. To provide munitions to weapons systems. This encompasses all types of ammunition to include mines and demolition munitions.

b. Fuel. To provide fuel and petroleum products (petroleum, oils, and lubricants) to weapons systems and other equipment.

c. Fix. To preserve the availability of weapons systems and equipment. It includes the provision of repair parts and end items at the right place and time, and all the actions taken before, during, and after the battle to keep equipment operational.

d. Man the Force. To provide all support to the individual soldier as well as provide healthy, fit soldiers to units.

e. Distribute. To provide the various classes of supply to military units by employing transportation and supply services.

f. Provide Sustainment Engineering. To repair and construct facilities and lines of communications.

g. Provide MP Support. To provide Enemy Prisoner of War collection, evacuation, internment, and to enforce military law and order.

7. Command and Control (C2). The exercise of authority and direction by a properly designated commander over an assigned force in the accomplishment of the mission. Leaders perform C2 functions through an arrangement of personnel, facilities, and procedures employed by a commander in planning, directing, coordinating, and controlling forces and operations in the accomplishment of the mission.

a. Acquire and Communicate Information and Maintain Status. To gain possession of information on the mission, enemy forces, friendly troops, terrain, and weather, by or for the commander or his staff, to translate that information into usable form and to retain and disseminate it.

b. Assess Situation. To continuously evaluate information received through reports or the personal observations of the leader or commander to decide whether different actions are required from those that would result from the most recent orders issued.

c. Determine Actions. To conduct the continuous process of making estimates and decisions for assigned or projected tasks. This function involves a detailed and systematic examination of all aspects of contemplated operations including deciding to alter planned or ongoing actions. This function also includes the formulation of the commander's concept and intent.

d. Direct and Lead Subordinate Forces. To provide direction to subordinate forces so they understand and contribute effectively and efficiently to the attainment of the commander's concept and intent. This function includes the preparation and completion of orders.

e. Employ Tactical Command, Control, and Communication Countermeasures (C3CM).

Automated Systems Approach to Training (ASAT)
The automated system for developing training.

Briefing
The act of giving specific instructions or information.

Claymore
M18A1 antipersonnel mine

Collective task
A clearly defined, discrete, and measureable activity, action, or event (i.e., task) which requires organized team or unit performance and leads to accomplishment of a mission or function. A collective task is derived from unit missions or higher level collective tasks. Task accomplishment requires performance of procedures composed of supporting collective or individual tasks. A collective task describes the exact performance a group must perform in the field under actual operational conditions.

Cue

Gist
Operator comments added to DF or fix files.

GO/NO-GO

This is a pass-fail criterion of evaluation whereby the soldier cannot be "partially correct." The soldier either meets the standard or does not meet the standard.

HD
The symbol for distilled Levinstein mustard, a blister agent. See FM 3-9.

Master
In validating training materials or tests, refers to an expert at the particular job or task.
